

Appendix II

A Structure for motion photogrammetry. **a** Photographs used to produce a rendering of the deposit. **B** 3-D model represented in an orthophoto. **C** Digital elevation model of the final deposit. For each deposit, at least 90 pictures were taken with a DSLR camera at a resolution of 4000x6000 pixels to build the rendering. The generated models achieve high accuracy (0.25mm x 0.25mm/pixel).
