1. Figures S1 to S5

2. Tables S1 to S5

Introduction

The supporting information provides additional information on the comparison between in situ observations and model simulations. Figures S1–S5 provide the vertical profiles of NO, O₃ and HO₂ for the individual research aircraft campaigns. Tables S1–S5 show the number of available data points for each altitude bin used to create Figures S1–S5.

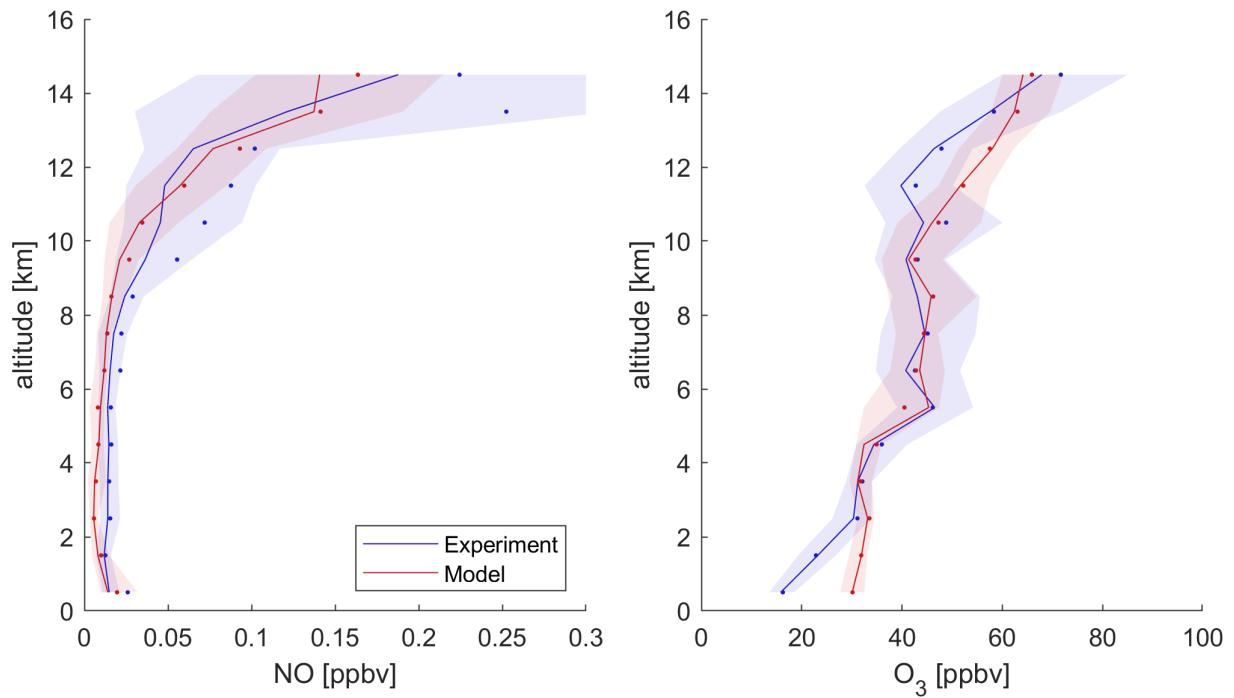

Figure S1. Vertical profiles of modeled (red) and experimental (blue) data of NO and O₃ for the research aircraft campaign CAFE Brazil. Lines and shades represent the median values and the 25th/75th percentiles, respectively. Dots show the mean values in the center of each 1km altitude bin.

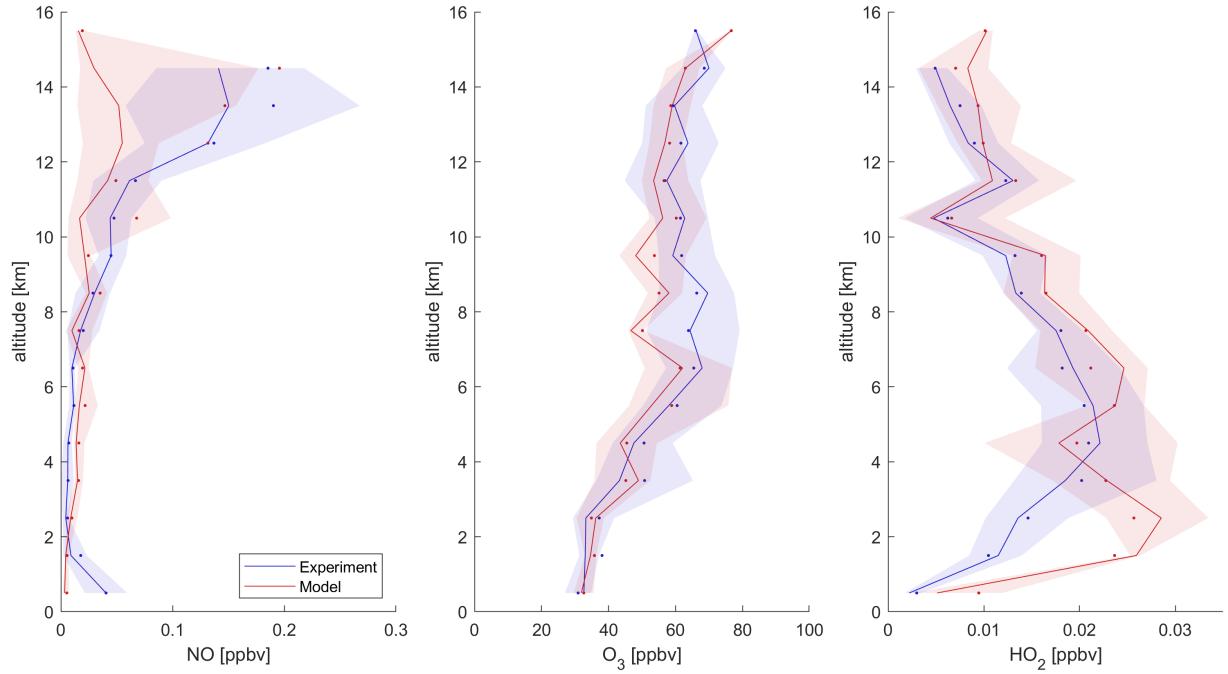

Figure S2. Vertical profiles of modeled (red) and experimental (blue) data of NO, O₃ and HO₂ for the research aircraft campaign CAFE Africa. Lines and shades represent the median values and the 25th/75th percentiles, respectively. Dots show the mean values in the center of each 1km altitude bin.

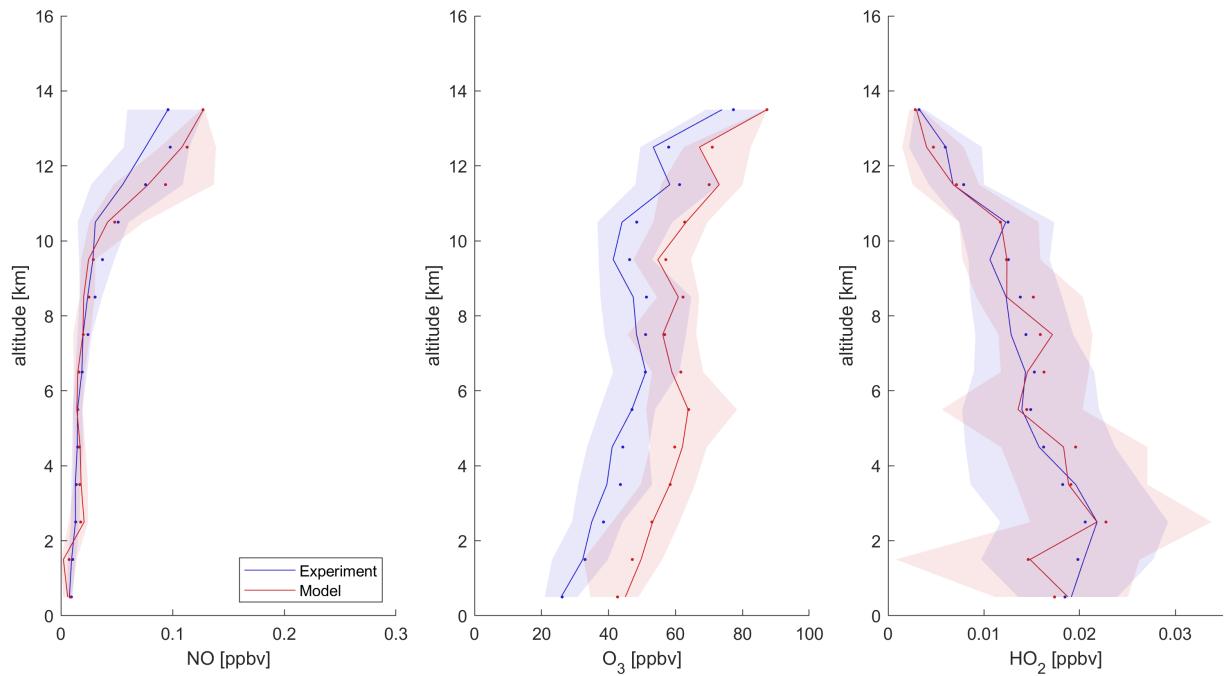

Figure S3. Vertical profiles of modeled (red) and experimental (blue) data of NO, O₃ and HO₂ for the research aircraft campaign ATom (Atlantic Ocean). Lines and shades represent the median values and the 25th/75th percentiles, respectively. Dots show the mean values in the center of each 1km altitude bin.

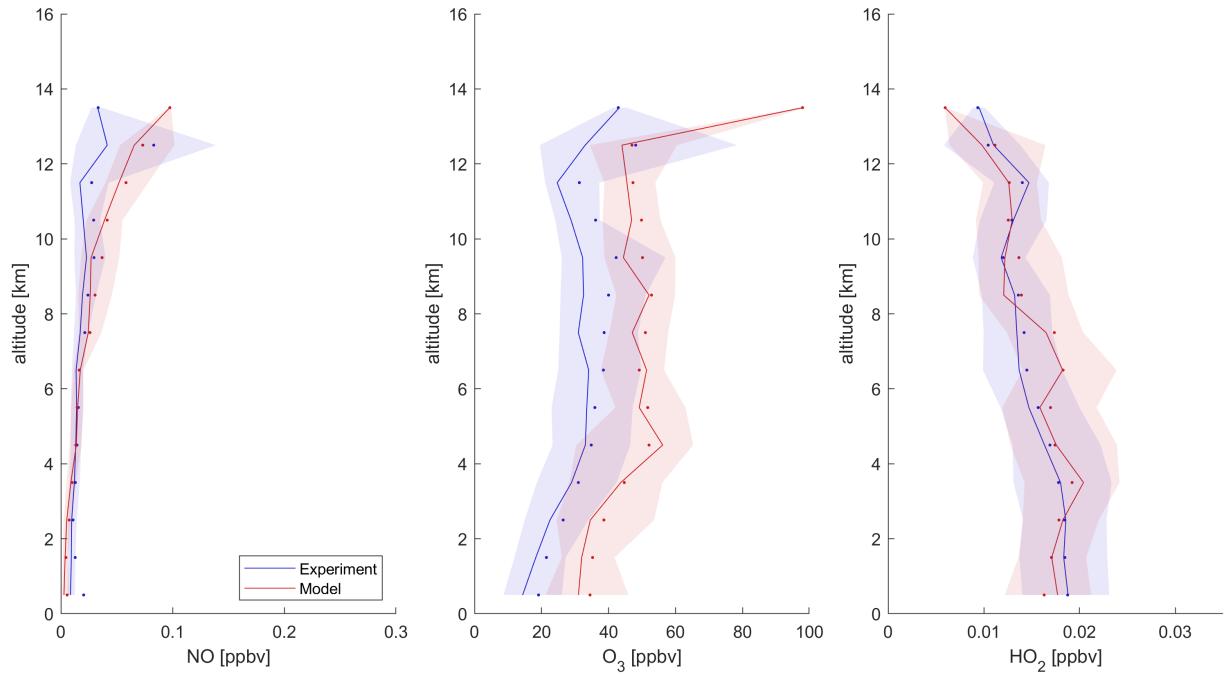

Figure S4. Vertical profiles of modeled (red) and experimental (blue) data of NO, O₃ and HO₂ for the research aircraft campaign ATom (Pacific Ocean). Lines and shades represent the median values and the 25th/75th percentiles, respectively. Dots show the mean values in the center of each 1km altitude bin.

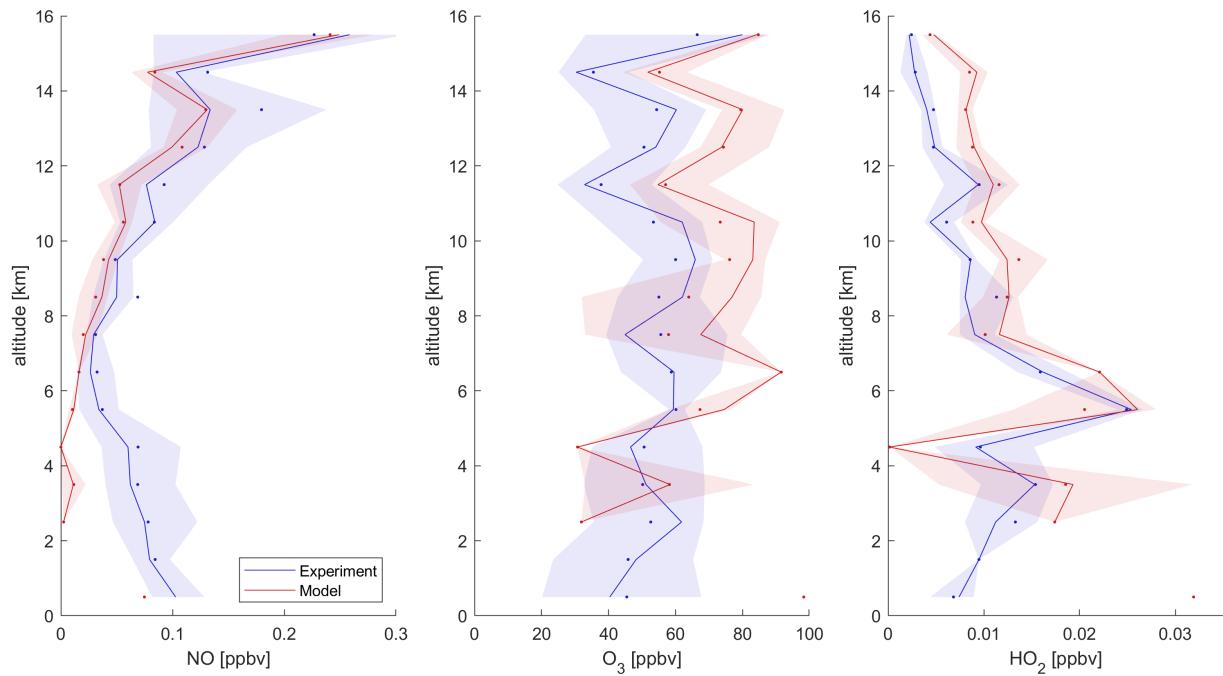

Figure S5. Vertical profiles of modeled (red) and experimental (blue) data of NO, O_3 and HO_2 for the research aircraft campaign OMO. Lines and shades represent the median values and the 25th/75th percentiles, respectively. Dots show the mean values in the center of each 1km altitude bin. Please note that the measurements in the lower troposphere were performed in the vicinity of the airport and may be locally influenced by aircraft NO_x emissions that are not well captured by the model with grid cells of about 180km in the horizontal direction.

Table S1. Number of data points per altitude bin for the research aircraft campaign CAFE Brazil for creating the vertical profiles in Figure S1.

| Altitude [m] | NO Exp | NO Model | O ₃ Exp | O ₃ Model |
|--------------|--------|----------|--------------------|----------------------|
| 500 | 687 | 96 | 690 | 96 |
| 1500 | 359 | 51 | 367 | 51 |
